ance Notes on Codes and Abbreviations" appearing at the begin-  
ning of each regular issue of the PCT Gazette.*

(54) Title: TRITYL DERIVATIVES FOR ENHANCING MASS SPECTROMETRY

(57) Abstract: The present invention provides a method of forming an ion of formula (I) comprising the steps of: (i) reacting a compound of the formula (IIa); with a biopolymer, B<sub>P</sub>, having at least one group capable of reacting with M to form a covalent linkage, to provide a biopolymer derivative of the formula (IIIa); and (ii) cleaving the C-X bond between X and the α-carbon atom of the derivative of formula (IIIa) to form the ion of formula (I); where: C\* is a carbon atom bearing a single positive charge or a single negative charge; and X is a group capable of being cleaved from the α-carbon atom to form an ion of formula (I). The biopolymer derivatives of the invention have enhanced ionisability with respect to free biopolymer (B<sub>P</sub>) enabling improved analysis of the biopolymer using mass spectrometry.
